RFI - Building A 21st Century Bioeconomy

Attached is a Master Thesis Report from Boras University in Sweden done on Pure Lignin Environmental Technology Ltd. biomass pre-treatment process as compared to other current processes, showing the superiority of PLET's process and that its cellulose yields much more ethanol than the others!

The Environmentally friendly process also produces a superior grade native-form lignin (soluble, high molecular weight) and hemi-cellulose.

For more information on our process and products please check our website at: www.purelignin.com

Thank you.

Best regards,

Lani O'Flynn
