

**Subject: response to Request for Information (RFI) asking for public comments regarding 'Public Access to Peer-Reviewed Scholarly Publications Resulting from Federally Funded Research':**

**Date:** January 8, 2012 9:48:01 AM EST

- Authors, editors and publishers are committed to providing the broadest possible access to our publications. Our goal is to expand access to the latest breakthroughs in the scientific research and developments in academic thought.
- The main purpose of a scholarly journal is to report on original research or experimentation in order to make such information available to the global research community.
- It requires considerable investment to maintain the highest standards for peer-reviewed scientific publication and sustainable mechanisms are required to enable this system to continue. This is threatened by access policies that do not take these costs into account, and it is critically important that any new policies do not damage the publishing institutions on which the Federal Government and science depend.
- Overall, access to research articles is good, particularly in the United States, where 97% of researchers are happy with access to journal articles[1].
- Publishers are committed to identifying any gaps in access and have developed a number of mechanisms to close those gaps in sustainable ways. These include initiatives to broaden access for researchers in developing countries, patients, and the public.
- Any efforts by government to establish policies for peer-reviewed research should be done in consultation with all affected stakeholders, ensuring that such policies do not undermine the sustainability of the peer review publishing system which is necessary to ensure the quality and integrity of scientific research.

Sincerely, Nancy Keller
