

NATIONAL DRUG CONTROL STRATEGY

Data Supplement 2012

Message from the Director

The 2012 *National Drug Control Strategy* follows through on the Administration's commitment to chart a new course in our efforts to reduce illicit drug use and its consequences in the United States. The 2012 Strategy reflects new developments in our efforts to reduce drug use and its consequences, but our goal remains the same: a 15 percent reduction in the rate of drug use and similar reductions in drug use consequences over the course of five years (2010-2015). This goal will be pursued through a comprehensive and balanced approach preventing illicit drug use in our communities; intervening early in the health care system; strengthening drug treatment services and supporting the millions of Americans in recovery; breaking the cycle of drug use, crime, and incarceration; disrupting domestic drug production and trafficking; strengthening international partnerships; and improving drug-related information systems.

The *National Drug Control Strategy* lays out an evidence-based approach to reducing drug use and its consequences; therefore, timely and accurate data are essential to the Strategy's development, implementation, and assessment. In 2010, the Administration devoted an entire chapter of its inaugural *National Drug Control Strategy* to strengthening the information systems that support it. This commitment carries through to the 2012 Strategy.

This companion document to the 2012 *National Drug Control Strategy* compiles data from many drug-related information systems, providing a reference regarding what we know about drug use, its consequences, illicit drug production and trafficking, and other related statistics. The Administration will continue to work to strengthen these information systems in order to improve our understanding of the drug problem and develop the most effective approaches to protect public health and safety.

R. Gil Kerlikowske
Director, Office of National Drug Control Policy

Introduction and Legislative History

Up-to-date information on the availability and prevalence of illegal drugs and the criminal, health, and social consequences of their use is vital to the implementation of the *National Drug Control Strategy*. Such information also is important for measuring the effectiveness of Federal, state, and local drug control programs. *The Office of National Drug Control Policy (ONDCP) Reauthorization Act of 2006* defines ONDCP's reporting requirements, citing specific provisions of HR 6344 that address the contents of the *National Drug Control Strategy*, as follows:

- v.** An assessment of current illicit drug use (including inhalants and steroids) and availability, impact of drug use, and treatment availability, which assessment shall include—
 - I. estimates of drug prevalence and frequency of use as measured by national, State, and local surveys of illicit drug use and by other special studies of nondependent and dependent illicit drug use;
 - II. illicit drug use in the workplace and the productivity lost by such use; and
 - III. illicit drug use by arrestees, probationers, and parolees.
- vi.** An assessment of the reduction of illicit drug activity, as measured by—
 - I. the quantities of cocaine, heroin, marijuana, methamphetamine, ecstasy, and other drugs available for consumption in the United States;
 - II. the amount of marijuana, cocaine, heroin, methamphetamine, ecstasy, and precursor chemicals entering the United States;
 - III. the number of illicit drug manufacturing laboratories seized and destroyed and the number of hectares of marijuana, poppy, and coca cultivated and destroyed domestically and in other countries;
 - IV. the number of metric tons of marijuana, heroin, cocaine, and methamphetamine seized and other drugs; and
 - V. changes in the price and purity of heroin, methamphetamine, and cocaine; changes in the price of ecstasy; and changes in tetrahydrocannabinol level of marijuana and other drugs.
- vii.** An assessment of the reduction of the consequences of illicit drug use and availability, which shall include—
 - I. the burden illicit drug users placed on hospital emergency departments in the United States, such as the quantity of illicit drug-related services provided;
 - II. the annual national health care costs of drug use; and
 - III. the extent of drug-related crime and criminal activity.

INTRODUCTION AND LEGISLATIVE HISTORY

viii. A determination of the status of drug treatment in the United States, by assessing—

- I. public and private treatment utilization; and
- II. the number of illicit drug users the Director estimates meet diagnostic criteria for treatment.

A further provision stipulates the following:

“(C) SELECTION OF DATA AND INFORMATION—In selecting data and information for inclusion under subparagraph (A), the Director shall ensure—

- I. the inclusion of data and information that will permit analysis of current trends against previously compiled data and information where the Director believes such analysis enhances long-term assessment of the National Drug Control Strategy; and
- II. the inclusion of data and information to permit a standardized and uniform assessment of the effectiveness of drug treatment programs in the United States.

Data are available for many of the areas listed above; however, there are specific areas for which measurement systems are not yet fully operational. The tables presented in this volume contain the most current drug-related data on the areas the *2006 ONDCP Reauthorization Act* requires ONDCP to assess.

Improving Federal Drug-Related Data Systems

ONDCP supports improvements to enhance the policy relevance of Federal drug-related data systems. These include the following developments:

- Since the National Institute of Justice (NIJ) discontinued the *Arrestee Drug Abuse Monitoring* (ADAM) program in 2003–2004, ONDCP resumed data collection starting in 2007 at 10 sentinel locations across the country. The new round of ADAM data, designated as *ADAM II*, uses both self-report and urinalysis-based measurement of recent drug use and permits trend comparisons with the earlier series collected in 2000–2003 for each data collection site. This enables the production of local estimates of drug use prevalence among the adult male arrestee population. Annual data collection cycles are continuing through 2012 under ONDCP funding and management. In 2012, the number of sites was reduced from 10 to 5 due to resource restrictions.
- The Center for Behavioral Health Statistics and Quality, formerly the Office of Applied Studies (OAS) of the Substance Abuse and Mental Health Services Administration (SAMHSA) is planning a redesign of the *National Survey on Drug Use and Health* to implement improvements in the study methodology.
- SAMHSA's OAS undertook a redesign of the *Drug Abuse Warning Network* (DAWN) system in 2003 in efforts to maintain alignment with the health care delivery system. The redesigned DAWN is an important source of national and local data on substance abuse derived from information on visits to hospital emergency departments and drug-related deaths identified by medical examiners. DAWN has recently posted online detailed tables for the period 2004 to 2009 at the national level as well as for the participating metropolitan areas.
- ONDCP is leading an interagency effort to update drug availability estimates—from source countries through availability in the United States—for cocaine, heroin, marijuana, and methamphetamine. The first round of estimates was published in 2002, and a new round of estimates is currently in development. Results from this project are providing critical measures enabling assessment of the Nation's supply-reduction programs.

ONDCP also has re-established two interagency working groups to address data and analysis issues—one on drug demand and the other on drug supply. These working groups help implement a key focus of the *National Drug Control Strategy* to improve information systems for analysis, assessment, and local management in the drug control field. This entails attention to existing Federal data systems that need to be sustained and enhanced; developing new data systems and analytical methods to address information gaps; and implementing measures of drug use and related problems that are useful at the community level.

Description of Data Sources

The following sections provide brief descriptions of the major data sources used to develop the Data Supplement.

National Survey on Drug Use and Health

(Source for Tables 1-6, 21-24, 26, 27, 34, 35, 54, 57, 58, 71-74, 78, and 79)

The *National Survey on Drug Use and Health* (NSDUH), formerly the *National Household Survey on Drug Abuse* (NHSDA), measures the prevalence of drug and alcohol use among household members ages 12 and older. Topics include drug use, health, and demographics. In 1991, it was expanded to include college students in dormitories, people living in homeless shelters, and civilians living on military bases. The NHSDA was administered by the National Institute on Drug Abuse (NIDA) from 1974 through 1991; SAMHSA has administered the survey since 1992. The data collection methodology was changed from paper-and-pencil interviews (PAPI) to computer-assisted interviews (CAI) in 1999, and the sample was expanded almost fourfold to permit state-level estimates and more detailed subgroup analyses, including racial and ethnic subgroups and single-year age categories. These and further changes in 2002, including the name change, payment of an incentive to respondents, and improved training of interviewers, have caused breaks in trend data after 1998 and after 2001. State-level estimates also are calculated using single-year data for more common behaviors and aggregated multiyear data for less common phenomena.

What America's Users Spend on Illegal Drugs: 1988–2000

(Source for Tables 7, 60, and 69)

This report estimates total U.S. expenditures on illicit drugs based on available drug price, purity, and demand data. Data are provided on estimated numbers of users and both yearly and weekly expenditures for drugs, which are then combined with drug price/purity data to calculate trends in total national drug expenditures and consumption. The first report was published by ONDCP in 1993. It was updated in 1995, 1997, and 2000. For each update, estimates for all years are adjusted due to changes in the database, methodology improvements, and assumption adjustments. These estimates currently are being updated.

Monitoring the Future: A Continuing Study of the Lifestyles and Values of Youth

(Source for Tables 8-10, 16–18)

The *Monitoring the Future* (MTF) study provides information on drug-use trends and changes in values, behaviors, and lifestyle orientations of American youth. The study examines drug-related issues, including recent drug use, perceived harmfulness of drugs, disapproval of drug use, and perceived availability of drugs. Although the initial focus of MTF has been high school seniors and graduates who complete follow-up surveys, 8th- and 10th-graders were added to the study sample in 1991. The University of Michigan has conducted the study under a grant from NIDA since 1975, and new data are released in December of each year.

Youth Risk Behavior Survey

(Source for Tables 11–15, 19, 20, 75–77, 93, and 94)

The *Youth Risk Behavior Survey* (YRBS) is a component of the Youth Risk Behavior Surveillance System (YRBSS), conducted by the Centers for Disease Control and Prevention (CDC) in conjunction with some state and local jurisdictions. The YRBSS has the following three complementary components: (1) national school-based surveys, (2) state and local school-based surveys, and (3) special population surveys, which thus far have included a national household-based survey conducted in 1992 and a survey of alternative schools. Each of these components provides unique information about various subpopulations of adolescents in the United States. The school-based survey was initiated in 1990, and thereafter, has been conducted biennially in odd-numbered years among national probability samples of 9th- through 12th-graders from public and private schools. Schools with a large proportion of Black and Hispanic students are oversampled to provide stable estimates for these subgroups. The national *Alternative High School Youth Risk Behavior Survey* (ALT-YRBS), conducted in 1998, is a nationally representative sample of students enrolled in alternative high schools who are at high risk for failing or dropping out of regular high school or who have been expelled from regular high school because of illegal activity or behavioral problems. The most recent available YRBS was conducted in 2009, and 2011 results are expected in midyear 2012.

Survey of Inmates in Federal Correctional Facilities and Survey of Inmates in State Correctional Facilities

(Source for Table 28)

The Bureau of Justice Statistics (BJS), Office of Justice Programs, Department of Justice, conducts the *Survey of Inmates in Federal Correctional Facilities* (SIFCF) and *Survey of Inmates in State Correctional Facilities* (SISCF) every 5 or 6 years. These surveys provide comprehensive background data on inmates in Federal and state correctional facilities, based on confidential interviews with a nationally representative sample of inmates. Topics include current offenses and sentences, criminal histories, family and personal backgrounds, gun possession and use, prior alcohol and drug treatment, and educational programs and other services provided in prison. The SIFCF and SISCF were sponsored jointly in 1991 by BJS and the Bureau of Prisons and conducted by the Census Bureau. The most recent surveys were conducted in 2004, and before that, in 1997. Jail inmates were surveyed in 1998 as part of the survey of inmates in local facilities and included a special addendum on drug testing, sanctions, and interventions. More recently, in 2002, the *Survey of Inmates in Local Jails* was conducted. These surveys provide information on substance use among prison and jail inmates. The next round of inmate surveys is expected to occur in 2013.

Homelessness: Programs and the People They Serve

(Source for Tables 29–31)

The *National Survey of Homeless Assistance Providers and Clients* gives a full picture of homeless service users in late 1996, the only time such a study was conducted. It provides information about the providers of homeless assistance services and the characteristics of homeless clients who use these services. Information from this survey was intended for use by Federal agencies responsible for administering homeless assistance programs and by other interested parties. The survey was conceived, developed, and funded by 12 Federal agencies under the auspices of the Interagency

DESCRIPTION OF DATA SOURCES

Council on the Homeless, a working group of the White House Domestic Policy Council. The Census Bureau carried out the data collection on behalf of the sponsoring agencies. The survey, released in December 1999, offered the first opportunity since 1987 to update the national picture of homelessness in a comprehensive and reliable way.

Survey of Health Related Behaviors among Active Duty Military Personnel

(Source for Tables 32 and 33)

The Department of Defense commissioned the *Survey of Health Related Behaviors Among Active Duty Military Personnel* in 2008. It is part of a series of periodic surveys (previously known as the *Survey of Health Related Behaviors Among Military Personnel*) on health-related behavior, including illicit drug use, among active-duty military personnel. The survey was conducted in 1980, 1982, 1985, 1988, 1992, 1995, 1998, 2002, 2005, and 2008. Before 2008, the DoD surveyed a representative sample of personnel in the services under its jurisdiction—the Army, Navy, Marine Corps, and Air Force. The Coast Guard, under the Department of Homeland Security, was added to the 2008 survey. Because of changes in the drug questions implemented in 2005 and 2008, the latest data are not comparable with those of previous years. A new survey round was conducted in 2011, but results are not yet available.

The Economic Costs of Drug Abuse in the United States

(Source for Tables 37, 84, and 95)

ONDCP commissioned the study *The Economic Costs of Drug Abuse in the United States, 1992–2002* to update a previous study it sponsored in 2001. Prior to this, the study was conducted by NIDA and the National Institute on Alcohol Abuse and Alcoholism (NIAAA). The report uses a cost-of-illness methodology and was released by ONDCP in December 2004. A companion unpublished report, *The Economic Costs of Drug Abuse in the United States: Estimates for States and Selected Metropolitan Areas, 2002*, developed cost estimates at the state level and for 25 major metropolitan areas.

The Economic Impact of Illicit Drug Use on American Society

(Source for Table 38)

The U.S. Department of Justice National Drug Intelligence Center commissioned the study *The Economic Impact of Illicit Drug Use on American Society* to monetize the consequences of illicit drug use for the year 2007. Although it uses a cost-of-illness framework, methodological details of this 1-year study yield estimates that are not comparable to prior estimates, such as those conducted by NIDA, NIAAA, and ONDCP.

National Vital Statistics Data

(Source for Tables 39–41, 82, and 83)

Data on drug-induced deaths are based on information from all death certificates filed (2.4 million in 2007) in the 50 States and the District of Columbia. Information from the states is provided to the National Center for Health Statistics (NCHS), a component of CDC. NCHS tabulates causes of death attributable to drug-induced mortality. Drug-induced deaths include not only deaths from dependent and nondependent use of legal or illegal drugs, but also poisoning from medically prescribed and other drugs. Drug-induced causes exclude unintentional injuries, homicides, and other causes indirectly related to drug use. Also excluded are newborn deaths due to the mother's

DESCRIPTION OF DATA SOURCES

drug use. The *International Classification of Diseases, Version 10* (ICD-10) was implemented in 1999 following conventions defined by the World Health Organization to replace Version 9 (ICD-9), in use since 1979. In addition to data published by CDC, unpublished state-level tabulations were provided by NCHS on drug-induced death trends.

Drug Abuse Warning Network

(Source for Tables 42-44 and 101-110)

The *Drug Abuse Warning Network* (DAWN) provides data on drug-related emergency department episodes and medical examiner cases. DAWN helps Federal, state, and local drug policymakers to examine drug-use patterns and trends and assess health hazards associated with drug abuse. DAWN collects data on the demographic characteristics of substance abusers and the specific drugs involved in each drug-related emergency department visit or death. NIDA maintained DAWN from 1982 through 1991; SAMHSA has maintained it since 1992. In 2003, DAWN was redesigned to accommodate enhancements, including establishing a sentinel hospital system for early reporting, changing the case-reporting criteria, and converting from paper to electronic forms. The redesigned system includes immediate access to data by participating sites (*DAWN Live!*). Due to these major changes, historical data from 2002 and earlier are not comparable to 2003 and later. DAWN detailed tables have been posted online for the period 2004 to 2009 for national estimates as well as for participating metropolitan areas.

HIV/AIDS Surveillance Reports

(Source for Tables 45 and 46)

The HIV/AIDS Surveillance Reports contain tabular and graphic information about U.S. AIDS and HIV case reports, including data by state, metropolitan statistical area, mode of exposure to HIV, sex, race/ethnicity, age group, vital status, and case definition category. The Division of HIV/AIDS Prevention, National Center for HIV, STD, and TB Prevention, a component of CDC, publishes this report semiannually. Data on mode of exposure to HIV are of interest to the *Strategy* in light of the role of injection drug use in HIV transmission.

Reported Tuberculosis in the United States

(Source for Table 47)

The *TB Surveillance Reports* contain tabular and graphic information about reported tuberculosis cases collected from 59 reporting areas (the 50 States, the District of Columbia, New York City, U.S. dependencies and possessions, and independent nations in free association with the United States). The reports include statistics on tuberculosis case counts and case rates by state and metropolitan statistical area, with tables of selected demographic and clinical characteristics (e.g., race/ethnicity, age group, country of origin, form of disease, and drug resistance). The Division of TB Elimination, National Center for HIV, STD, and TB Prevention, a component of CDC, publishes the report annually. The reports also include information on injection drug use and non-injection drug use among TB cases.

Summary of Notifiable Diseases

(Source for Table 48)

This data system publishes summary tables of the official statistics for the reported occurrence of nationally notifiable diseases in the United States, including hepatitis. These statistics are collected and compiled from reports to the National Notifiable Diseases Surveillance System, which is operated by CDC in collaboration with the Council of State and Territorial Epidemiologists. These data

DESCRIPTION OF DATA SOURCES

are finalized and published in CDC's *Morbidity and Mortality Weekly Review Summary of Notifiable Diseases, United States* for use by state and local health departments; schools of medicine and public health; communications media; local, state, and Federal agencies; and other agencies or individuals interested in following the trends of reportable diseases in the United States. The annual publication of the summary also documents which diseases are considered national priorities for notification and the annual number of cases of such diseases.

Uniform Crime Reports

(Source for Tables 49 and 50)

The *Uniform Crime Reports* (UCR) is a nationwide census of thousands of city, county, and state law enforcement agencies compiled by the Federal Bureau of Investigation (FBI). The goal of the UCR is to count in a standardized manner the number of offenses, arrests, and clearances known to police. Each law enforcement agency voluntarily reports data on crimes. Data are reported for the following nine index offenses: murder and manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny, theft, motor vehicle theft, and arson. Data on drug arrests, including arrests for possession, sale, and manufacturing of drugs, are included in the database. Distributions of arrests for drug abuse violations by demographics and geographic area also are available. UCR data have been collected since 1930; the FBI has collected data under a revised system since 1991.

National Prisoner Statistics Program

(Source for Table 51)

The *National Prisoner Statistics* (NPS) program, operated by the Bureau of Justice Statistics, collects statistics on prisoners at midyear and yearend. The Census Bureau serves as the data collection agent for BJS. BJS depends upon the voluntary participation of state departments of corrections and the Federal Bureau of Prisons for NPS data. BJS compiles an annual report on the number of persons in state and Federal prisons at yearend. The most recent annual report, *Prisoners in 2009*, compares the prison population with the previous year. It includes the number of prisoners held at yearend in the U.S. territories and commonwealths, in military facilities, and in facilities operated by or for the U.S. Immigration and Customs Enforcement. Data are presented on prison capacities and the use of local jails and privately operated prisons. Estimates are provided on the number of sentenced prisoners by age, gender, race, and Hispanic origin, and type of offense, including prisoners who are drug offenders.

The Monetary Value of Saving a High-Risk Youth

(Source for Tables 52-53)

Based on estimates of the social costs associated with the typical career criminal, the typical drug user, and the typical high school dropout, this study by Mark A. Cohen calculates the average monetary value of saving a high-risk youth. The base data for establishing the estimates are derived from other studies and official crime data that provide information on numbers and types of crimes committed by career criminals, as well as the costs associated with these crimes and with drug abuse and dropping out of school.

National Survey of Substance Abuse Treatment Services

(Source for Tables 55, 56, 80, and 81)

The National Survey of Substance Abuse Treatment Services (N-SSATS) measures the location, scope, and characteristics of drug abuse and alcoholism treatment facilities throughout the United

DESCRIPTION OF DATA SOURCES

States. In 2002, SAMHSA redesigned and renamed the survey N-SSATS. It was previously named the Uniform Facility Data Set (UFDS) and the National Drug and Alcoholism Treatment Unit Survey (NDATUS). The survey collects data on unit ownership, type, and scope of services provided; sources of funding; number of clients; treatment capacities; and utilization rates. Data are reported for a point prevalence date in the fall of the year in which the survey is administered. Many questions focus on the 12 months prior to that date. The N-SSATS, then called NDATUS, was administered jointly by NIDA and the National Institute on Alcohol Abuse and Alcoholism from 1974 to 1991. SAMHSA has administered this data system since 1992.

Treatment Episode Data Set

(Source for Table 59)

The *Treatment Episode Data Set* (TEDS) provides information on the demographic and substance abuse characteristics of annual admissions to treatment for abuse of alcohol, drugs, or both. It includes admissions to facilities that are licensed or certified by the state substance abuse agency to provide substance abuse treatment. Because TEDS is an admissions-based system, these data do not represent individuals, since an individual admitted to treatment twice within a calendar year would count as two admissions. SAMHSA administers this data system.

Drug Availability Estimates in the United States

(Source for Table 61)

The report *Drug Availability Estimates in the United States*, published in December 2002, was developed in response to a request from the U.S. Attorney General for measurement of the quantity of illicit substances available to drug users in the United States. ONDCP and the U.S. Department of Justice led an interagency effort to develop drug availability estimates for 2001 for the four major drugs—cocaine, heroin, methamphetamine, and marijuana. Working groups were staffed by members from the following Federal agencies: Crime and Narcotics Center, Drug Enforcement Administration, Defense Intelligence Agency, Department of Homeland Security, Department of Justice, National Institute of Justice, El Paso Intelligence Center, Joint Interagency Task Force West, National Drug Intelligence Center, ONDCP, Substance Abuse and Mental Health Services Administration, the Department of Treasury, and the U.S. Interdiction Coordinator. This document is a compendium of the reports from each of the working groups. There is significant uncertainty in these estimates due to the illicit and clandestine nature of the various drugs, and the limited data available to aid in these analyses. An update is currently being developed.

The Price and Purity of Illicit Drugs

(Source for Tables 62-65)

This study commissioned by ONDCP updates national-level drug price and purity trends for the three major drugs: cocaine (with crack as a subset), heroin, and methamphetamine. National-level price trends for marijuana also are provided, but purity trends are not because THC content is not typically measured and is not recorded in DEA's database. DEA's *System To Retrieve Information on Drug Evidence* (STRIDE) is the primary source of data for this study. STRIDE provides laboratory analyses of street-level drug purchases and of drugs removed from the marketplace where DEA participated in the seizure(s). The system also provides analyses of drug evidence and their physical and chemical attributes to determine geographic origins. Regional price and purity trends are weighted by DAWN data to calculate a national-level estimate. These estimates became available

DESCRIPTION OF DATA SOURCES

in July 2008, prepared by the Institute for Defense Analyses. In 2012, the same methodology was applied to data through 2011. Price data are expressed in current dollars.

University of Mississippi Potency Monitoring Project

(Source for Table 66)

The University of Mississippi (UM) issues a Quarterly Report for the *Potency Monitoring Project* that publishes average concentrations of THC for various types of cannabis specimens. UM conducts all U.S. Government potency testing of eradicated and seized cannabis through a NIDA contract. The specimens of domestically eradicated cannabis are sent to UM from state and local drug labs. In addition, specimens of seized cannabis are sent from DEA's field forensic labs.

Federal-Wide Drug Seizure System

(Source for Table 67)

The Federal-Wide Drug Seizure System (FDSS) is a computerized system that deconflicts overlapping information about drug seizures made by and with the participation of the FBI, the DEA, and the Department of Homeland Security. The FDSS database includes drug seizures by other Federal agencies (e.g., the Forest Service) to the extent that custody of the drug evidence was transferred to one of the three agencies identified above. The FDSS has been maintained by DEA since 1988.

Drug Enforcement Administration

(Source for Tables 68 and 85-89)

DEA's Office of Domestic Cannabis Eradication/Suppression Program provides resources to state and local law enforcement for cannabis eradication. The data tabulated in these tables are from state and local law enforcement agencies reporting of the results of their efforts.

National Seizure System

(Source for Tables 70 and 90-92)

The National Seizure System (NSS) includes data pertaining to clandestine methamphetamine laboratories seized in the United States by local, state, and Federal law enforcement agencies. The records contained in the system are under the control and custody of the DEA, and are maintained in accordance of Federal laws and regulations. Use of the information is limited to law enforcement agencies in connection with activities pertaining to the enforcement of criminal laws. The El Paso Intelligence Center (EPIC) is the central repository for these data. The data are useful in determining, among other criteria, the types, numbers, and locations of meth laboratories seized; manufacturing trends; precursor and chemical sources; the number of children and law enforcement officers affected; and investigative leads.

Arrestee Drug Abuse Monitoring

(Source for Tables 96-100)

The National Institute of Justice established the Drug Use Forecasting program in 1987 to provide an objective assessment of the drug problem among those arrested and charged with crimes. In 1997, this program became the Arrestee Drug Abuse Monitoring (ADAM) program. Arrestees were interviewed and asked to provide urine specimens that were tested for evidence of drug use. Urinalysis results were matched to arrestee characteristics to help monitor trends in drug use. ADAM collected data in 39 major metropolitan sites across the United States in 2003. Data collection was suspended in 2004 due to funding constraints. In 2007, ONDCP resumed collection of ADAM data

DESCRIPTION OF DATA SOURCES

from 10 sentinel sites, focusing on male arrestees. The new data, referred to as *ADAM II*, are designed to be trendable with data from 2000 to 2003.

The European School Survey Project on Alcohol and Other Drugs

(Source for Tables 111 and 112)

The *European School Survey Project on Alcohol and Other Drugs* (ESPAD) was jointly published by the Swedish Council for Information on Alcohol and Other Drugs, the Council of Europe Co-Operation Group to Combat Drug Abuse and Illicit Trafficking in Drugs (Pompidou Group) and, most recently, the European Monitoring Centre for Drugs and Drug Addiction. Under this project, data on drug use prevalence were collected from annual school surveys in a number of European countries in 1995, 1999, 2003, and 2007. The target age of youth surveyed was 15 years, comparable to 10th-graders in the United States. The substances focused on included alcohol, tobacco, and other drugs, with 35 countries participating in the 2007 ESPAD.

International Narcotics Control Strategy Report

(Source for Tables 61, 113, 114, 116, 118-119, 121-124)

The *International Narcotics Control Strategy Report* (INCSR) provides the President with information on the steps taken during the previous year by the main illicit drug-producing and transit countries to prevent drug production, trafficking, and related money laundering. The INCSR helps determine how cooperative a country has been in meeting legislative requirements in various geographic areas. Drug supply figures, such as seizures and cultivation estimates, are forwarded from each host nation, through the American embassy, to this U.S. Department of State report, which is released in March of each year.

U.S. Government

(Source for Tables 115, 117, and 120)

The annual potential production estimates for each country cultivating significant amounts of illicit coca and poppy are presented in annual briefings by the U.S. Government intelligence community. These unpublished presentations provide the figures used to calculate the potential production numbers for each growing area. Those data include net cultivation, leaf production, and the crop yield and processing efficiencies.

Colombian National Police (CNP)/U.S. Department of State INL Air Wing

(Source for Table 119)

Eradication figures for Colombia represent aerial eradication from 1999 to 2004 and are obtained from the U.S. Department of State's Bureau of International Narcotics and Law Enforcement Affairs (INL) working with the Policia Nacional de Colombia (CNP). CNP is responsible for airborne coca and poppy eradication. INL and CNP have collaborated in the mounting of a campaign using spray planes to eradicate coca and opium poppy cultivation. INL has assisted the CNP with training, maintenance, logistics, and operational support to make this effort possible. The program also provided logistical and operational support in the form of cargo airplanes and an airborne Multi-spectral Digital Imaging System (MDIS) for identification and mapping of coca. The CNP/INL Air Wing provides unpublished periodic data on coca and poppy eradication.

2004	19,071	14,576	2,021	14,512	3,145	2,674	1,909	2,762
2005	19,720	14,626	2,397	12,663	3,534	2,511	1,730	2,658
2006	20,357	14,813	2,421	14,206	3,785	2,481	1,689	2,561
2007	19,857	14,448	2,075	13,065	3,780	2,409	1,686	2,422
2008	20,077	15,203	1,855	12,598	3,788	2,304	1,657	2,307
2009	21,813	16,718	1,637	12,837	3,683	2,471	1,799	2,267
2010	22,622	17,373	1,466	13,012	4,126	2,466	1,796	2,005

Note: "Any illicit drug use" includes use of marijuana, cocaine, hallucinogens, inhalants (except in 1982), heroin, or nonmedical use of sedatives, tranquilizers, stimulants, or analgesics. The exclusion of inhalants in 1982 is believed to have resulted in underestimates of any illicit use for that year, especially for adolescents.

Data not available.

¹ In 1999, the survey methodology changed from a paper-and-pencil interview (PAPI) to a computer-assisted interview (CAI). Estimates based on the new CAI methodology are not directly comparable to previous years. In 2002, the survey was renamed the National Survey on Drug Use and Health, and methodological changes were implemented that significantly affected reported prevalence rates. Therefore, estimates since 2002 are not directly comparable to previous years.

² Data for past-month (current) use.

³ Prior to a 1994 questionnaire change, data did not allow separate reporting for this age group.

Data not available.

¹ Past Year Initiates are defined as persons who used the substance(s) for the first time in the 12 months prior to date of interview.

² Illicit Drugs include marijuana/hashish, cocaine (including crack), heroin, hallucinogens, inhalants, or prescription-type psychotherapeutics used nonmedically. Illicit Drugs Other Than Marijuana include cocaine (including crack), heroin, hallucinogens, inhalants, or prescription-type psychotherapeutics used nonmedically.

³ Nonmedical use of prescription-type pain relievers, tranquilizers, stimulants, or sedatives; does not include over-the-counter drugs.

⁴ Daily Cigarette Use is defined as ever smoking every day for at least 30 days.

Table 7. Estimated Number of Chronic and Occasional Users of Cocaine and Heroin, 1988–2000 (Thousands)

Year	Cocaine users		Heroin users	
	Occasional ¹	Chronic ²	Occasional ¹	Chronic ²
1988	6,000	3,984	170	1,341
1989	5,300	3,824	150	1,266
1990	4,600	3,558	140	1,119
1991	4,478	3,379	359	1,015
1992	3,503	3,269	304	955
1993	3,332	3,081	230	945
1994	2,930	3,032	281	932
1995	3,082	2,866	428	923
1996	3,425	2,828	455	910
1997	3,487	2,847	597	904
1998	3,216	2,800	253	901
1999	3,216	2,755	253	898
2000 ³	3,035	2,707	253	898

Note: Data in this table are composite estimates derived from the *National Household Survey on Drug Abuse* (NHSDA) and the *Arrestee Drug Abuse Monitoring* (ADAM) program. For a detailed description of the methodology, see Rhodes, W. (1993), Synthetic Estimation Applied to the Prevalence of Drug Use, *Journal of Drug Issues* 23(2):297–321. The NHSDA was not administered in 1989. Estimates for 1989 are the average for 1988 and 1990.

¹ "Occasional" is defined as using drugs fewer than 10 days per month.

² "Chronic" is defined as more than 10 days per month.

³ Estimates for 2000 are projections.

¹ Unadjusted for underreporting of amyl and butyl nitrites. Data for 12th-graders only are based on five of six questionnaire forms; N is five-sixths of N indicated.

² For 1993, the question text was changed slightly in one-half of the forms to indicate that a “drink” meant “more than just a few sips.” For 1993, N is one-half of N indicated for all groups. Data after 1993 were based on all forms.

¹ Any Illicit Drug includes marijuana/hashish, cocaine (including crack), heroin, hallucinogens, inhalants, or any prescription-type psychotherapeutic used nonmedically.

² Estimates include data from new methamphetamine items added in 2005 and 2006 and are not compatible with estimates presented in reports prior to the 2007 National Findings report.

³ Nonmedical use of prescription-type psychotherapeutics includes the nonmedical use of pain relievers, tranquilizers, stimulants, or sedatives and does not include over-the-counter drugs.

⁴ Binge Alcohol Use is defined as drinking five or more drinks on the same occasion on at least 1 day in the past 30 days.

⁵ Other Persons include respondents aged 18 to 22 not enrolled in school, enrolled in college part time, enrolled in other grades either full or part time, or enrolled with no other information available.

Table 38. Components of Estimated Costs to Society of Illicit Drug Use, 2007¹ (\$ Thousands)

Total Estimated Cost	\$193,096,930
Crime ²	\$61,376,694
Criminal Justice System Costs	\$56,373,254
Crime Victim Costs	\$1,455,555
Other Crime Costs	\$3,547,885
Health	\$11,416,232
Specialty Treatment Costs	\$3,723,338
Hospital and Emergency - nonhomicide	\$5,684,248
Hospital and Emergency - homicide	\$12,938
Insurance Administration Costs	\$544
Other Health Costs	\$1,995,164
Productivity	\$120,304,004
Labor Participation Costs	\$49,237,777
Specialty Treatment - State level	\$2,828,207
Specialty Treatment - Federal level	\$44,830
Hospitalization Costs	\$287,260
Incarceration Costs	\$48,121,949
Premature Mortality Costs - not homicide	\$16,005,008
Premature Mortality Costs - homicide	\$3,778,973

¹Estimates for 2007 are not comparable to earlier trend data in Table 37 above due to major methodological differences.

²Crime costs exclude lost productivity from incarceration and homicide, which are included under productivity costs.

NOTE: Coding for causes of death through 1998 was based on the World Health Organization *International Classification of Diseases, 9th edition* (ICD-9). In 1999, the 10th edition (ICD-10) was implemented.

¹ Drug-induced deaths under ICD-9 include drug psychoses, drug dependence, nondependent use of drugs not including alcohol and tobacco, accidental poisoning by drugs, suicide by drugs, assault from poisoning by drugs, and poisoning by drugs of undetermined intent (whether accidentally or purposely inflicted). Under ICD-10, drug-induced deaths include specific mental and behavioral disorders due to psychoactive substance use, accidental poisoning by drugs, intentional self-poisoning (suicide) by drugs, assault (homicide) by drugs, poisoning by drugs of undetermined intent and a number of causes of death explicitly linked to drug use. Detailed ICD-10 codes for drug-induced deaths are documented in "Deaths, Final Data for 2007" cited below. Drug-induced causes exclude accidents, homicides, and other causes indirectly related to drug use. Also excluded are new born deaths associated with mothers' drug use.

² Black is a subgroup of all non-white.

2009	37,004	20,848	15,597	28,754	15,326	12,553
Deaths per 100,000 Population						
1999	6.0	2.7	1.4	4.0	1.6	1.0
2000	6.2	2.8	1.6	4.2	1.7	1.1
2001	6.8	3.2	1.9	4.6	2.0	1.4
2002	8.2	4.0	2.6	5.7	2.6	1.9
2003	8.9	4.3	2.9	6.3	2.9	2.2
2004	9.3	4.8	3.4	6.8	3.3	2.6
2005	10.1	5.2	3.7	7.6	3.6	2.9
2006	11.5	6.2	4.6	8.8	4.5	3.7
2007	11.9	6.5	4.8	9.2	4.7	3.8
2008	12.0	6.6	4.9	9.3	4.8	3.9
2009	12.1	6.8	5.1	9.4	5.0	4.1

¹ Drug poisoning deaths are based on the following ICD-10 underlying cause codes: X40-X44, X60-X64, X85, Y10-Y14.

² Unintentional drug poisoning deaths include only those with ICD-10 underlying cause codes X40 to X44.

³ Among deaths with drug poisoning as the underlying cause of death, the following ICD-10 codes comprise "Prescription Drugs": T36-T39, T40.2-T40.4, T41-T43.5, and T43.7-T50.8. This category includes some over-the-counter medications. Not all drug poisoning deaths specify the drug(s) involved.

⁴ "Opioid Analgesics" include ICD-10 codes T40.2-T40.4 associated with drug poisoning as the underlying cause.

Category does not apply

¹ Excludes pediatric (<13 years old) AIDS cases. These numbers do not represent actual cases of persons living with AIDS. Rather, they are point estimates of persons living with AIDS derived by subtracting the estimated cumulative number of deaths in persons with AIDS from the estimated cumulative number of persons with AIDS. Estimated AIDS cases are adjusted for reporting delays and for redistribution of cases initially reported with no identified risk but not for incomplete reporting.

² Includes hemophilia, blood transfusion, and risk not reported.

³ Proportion includes injection drug users and MSM who are injection drug users.

¹ Arrest totals are based on all reporting agencies and estimates for unreported areas from table entitled "Estimated Number of Arrests, United States."

² Percentages may not add to 100 because of rounding.

³ Includes heroin or cocaine and their derivatives.

⁴ Includes sale/manufacture of drugs.

Data not yet available

¹ From 1989 to 1999, estimates for state prisoners held for drug offenses as the most serious crime were made using the Survey of Inmates in State Correctional Facilities, and adjusted up to the custody population collected in the National Prisoner Statistics. After 1999, estimates for state prisoners held for drug offenses as the most serious crime were made using the National Correctional Reporting Program and the National Prisoner Statistics.

² Percent of federal drug offenders calculated using the Federal Justice Statistics Resource Center query system and applied to the federal custody count and rounded for an estimated number of federal drug offenders.

Note: These estimates may not match previously published data. State and federal drug offender counts will differ from previous publications because custody rather than jurisdiction counts are used as denominators to enhance comparability to the 1989 to 1999 estimates.

Data not available.

¹ Numbers of clients represent a 1-day census of clients enrolled in substance abuse treatment.

² Changes in data collection methods include: Before 1992, no attempt was made to adjust for survey nonresponse. Beginning in 1992, survey nonrespondents were contacted to obtain a minimum data set. This is reflected in larger and more consistent numbers of clients.

³ Total includes other category.

Note: Respondents were classified as needing treatment for an illicit drug problem if they met at least one of three criteria during the past year:

- (1) dependence on any illicit drug;
 - (2) abuse of any illicit drug; or
 - (3) received treatment for an illicit drug problem at a specialty facility (i.e., drug and alcohol rehabilitation facilities [inpatient or outpatient], hospitals [inpatient only], and mental health centers).
- Illicit drugs include marijuana/hashish, cocaine (including crack), inhalants, hallucinogens, heroin, and nonmedical use of prescription-type psychotherapeutics.

Note: The Treatment Episode Data Set (TEDS) is an admissions-based system and includes admissions to facilities that are licensed or certified by the State substance abuse agency to provide substance abuse treatment. In general, reporting facilities are those that receive State alcohol and/or drug funds for the provision of alcohol and/or drug treatment services.

¹ The category "All Types" of cannabis tested includes ditchweed and a small number of Thai sticks.

² These percentages, indicating potency, are based on simple arithmetic means calculated by dividing the sum of the delta-9THC concentrations of each sample by the number of seizures and are not normalized by weight of seizure.

³ Number of tested samples that yield the potency in prior column.

Data not available.

¹ Percentages are based on weighted data, which are representative of the state, except when enclosed in brackets. Bracketed percentages are based on unweighted data. Caution must be used in interpreting unweighted data, as these may not be representative of the state high school population. In 2001, three states with unweighted data (New York, Illinois, and Louisiana) did not include students from at least one of the state's largest school districts.

² Used at least once on at least 1 of the 30 days preceding the survey.

³ Survey did not include students from one of the state's largest school districts in 2003.

² Estimated numbers for 2008–2009 were not available at the time of publication.

Note: Needing But Not Receiving Treatment refers to respondents classified as needing treatment for illicit drugs, but not receiving treatment for an illicit drug problem at a specialty facility (i.e., drug and alcohol rehabilitation facilities, hospitals, and mental health centers). Illicit Drugs include marijuana/hashish, cocaine (including crack), inhalants, hallucinogens, heroin, or prescription-type psychotherapeutics used nonmedically.

Note: Data are based on a one-day census of clients in alcohol and/or drug treatment conducted for the following reference dates: October 1, 1997; October 1, 1998; October 1, 2000; March 29, 2002; March 31, 2006; March 30, 2007; and March 31, 2008–2010.

¹ Tabulations exclude clients in facilities that did not respond to this question: In 2000, 16,591 clients; in 2002, 13,048 clients; in 2003, 8,430 clients; in 2004, 5,900 clients; in 2005, 14,189 clients; in 2006, 8,325 clients; in 2007, 2,011 clients; in 2008, 3,188 clients; and in 2009, 2,690.

² Includes clients with drug problems only, alcohol problems only, and both drug and alcohol problems.

³ Excludes United States territories.

Note: Data are based on a one-day census of clients in alcohol and/or drug treatment conducted for the following reference dates: October 1, 1997; October 1, 1998; October 1, 2000; March 29, 2002; March 31, 2006; March 30, 2007; and March 31, 2008–2010.

¹ Includes clients with drug problems only and both drug and alcohol problems.

² Excludes United States territories.

Sources: Substance Abuse and Mental Health Services Administration, Center for Behavioral Health Statistics and Quality. *National Survey of Substance Abuse Treatment Services (N-SSATS)* 2006–2010 (September 2011) for data from 2006 to 2010; earlier years are from previous N-SSATS reports.

Note: Drug-induced deaths include specific mental and behavioral disorders due to psychoactive substance use, accidental poisoning by drugs, intentional self-poisoning (suicide) by drugs, assault (homicide) by drugs, poisoning by drugs of undetermined intent and a number of causes of death explicitly linked to drug use. Drug-induced causes exclude accidents, homicides, and other causes indirectly related to drug use. Also excluded are newborn deaths associated with mothers' drug use. Detailed ICD-10 codes for drug-induced deaths are documented in Miniño, AM, Murphy, SL, Xu, J, and Kochanek, KD. Deaths, Final Data for 2008. *National Vital Statistics Reports* 59(10)(2011).

Note: Drug-induced deaths include specific mental and behavioral disorders due to psychoactive substance use, accidental poisoning by drugs, intentional self-poisoning (suicide) by drugs, assault (homicide) by drugs, poisoning by drugs of undetermined intent and a number of causes of death explicitly linked to drug use. Drug-induced causes exclude accidents, homicides, and other causes indirectly related to drug use. Also excluded are newborn deaths associated with mothers' drug use. Detailed ICD-10 codes for drug-induced deaths are documented in Miniño, AM, Murphy, SL, Xu, J, and Kochanek, KD. Deaths, Final Data for 2008. *National Vital Statistics Reports* 59(10) (2011).

Data not available.

¹ Percent positive by urinalysis; percentages are rounded. Percentages for 2000 to 2003 were re-estimated to enhance trend comparisons and may not match previously published estimates.

² “Any drug” includes cocaine, opiates, PCP, marijuana, amphetamines, methadone, methaqualone, benzodiazepines, barbiturates, and propoxyphene.

³ In 2001 to 2003, the definition of “any drug” pertains to any one of the NIDA-5 drugs (cocaine, opiates, marijuana, methamphetamine, and PCP); thus these numbers are not directly comparable to other years.

Data not available.

¹ Students surveyed were in the 15–16 year age range, approximately equivalent to 10th graders in the United States.

² "Any illicit drug" includes cannabis, ecstasy, amphetamines, LSD or other hallucinogens, crack, cocaine, and heroin.

³ Flanders only in 2007.

⁴ Former Yugoslav Republic of Macedonia.

⁵ Bundesl, only in 2007.

⁶ Moscow only in 1999.

⁷ Data for the United States are for 10th graders in the Monitoring the Future study.

Data not available.

¹ Although there is no solid information on Iranian opium production, the U.S. Government estimates that Iran may produce between 35 and 75 metric tons of opium gum annually.

² There was no information for 1992 production. For 1994, a vigorous eradication campaign reduced potential production to insignificant levels.

¹ The eradication figures shown for 1992–2001 are derived from data supplied by Mexican authorities to INCSR. The effective eradication figure is an estimate of the actual amount of crop destroyed—factoring in replanting, repeated spraying of one area, and other factors.

² Eradication figures shown for Colombia represent aerial eradication from 2000 to 2003; combined aerial and manual from 2004 to 2006; and manual eradication since 2007 after aerial eradication was discontinued in April 2006 to put all aerial assets against coca cultivation.

Data not available.

¹ Source Zone countries include Colombia, Peru, Bolivia, Venezuela, Ecuador, Brazil, and a residual "Other" category.

² Transit Zone to US Markets is classified into four categories: Mexico, Central America, High seas along the Mexican/Central American Corridor, and the Caribbean Sea.

³ Non-US Transit Zone is classified into the Atlantic Corridor, Africa, and the Western Pacific Corridor.

⁴ Worldwide seizures is the sum of total source zone, transit zone totals to US and non-US markets, arrival zone in both US and non-US, and internal US federal seizures.

Data not available.

¹ The eradication figures shown for 1992–2001 are derived from data supplied by Mexican authorities to INCSR. The effective eradication figure is an estimate of the actual amount of crop destroyed—factoring in replanting, repeated spraying of one area, and other factors. Reported cultivation is described as harvestable/net production.

Acronyms

ADAM	Arrestee Drug Abuse Monitoring system (formerly DUF)
AIDS	acquired immunodeficiency syndrome
BJS	Bureau of Justice Statistics
CAI	computer-assisted interview
CBHSQ	Center for Behavioral Health Statistics and Quality, formerly the Office of Applied Studies (part of SAMHSA)
CDC	Centers for Disease Control and Prevention
CSAP	Center for Substance Abuse Prevention (under SAMHSA)
CSAT	Center for Substance Abuse Treatment (under SAMHSA)
DAWN	Drug Abuse Warning Network
DEA	Drug Enforcement Administration
DSM-IV	Diagnostic and Statistical Manual, Fourth Edition
DUF	Drug Use Forecasting program
ED	hospital emergency department
EPIC	El Paso Intelligence Center
ESPAD	European School Survey Project on Alcohol and Other Drugs
FBI	Federal Bureau of Investigation
FDSS	Federal-Wide Drug Seizure System
FinCEN	Financial Crimes Enforcement Network
HHS	Department of Health and Human Services
HIDTA	High Intensity Drug Trafficking Areas program
HIV	human immunodeficiency virus
ICD-9	International Classification of Diseases, 9th Edition
ICD-10	International Classification of Diseases, 10th Edition
IDU	injection drug user
INCSR	International Narcotics Control Strategy Report
MDMA	3,4-methylenedioxymethamphetamine (Ecstasy)
ME	medical examiner
MSM	men who have sex with men

ACRONYMS

MTF	Monitoring the Future study
N-SSATS	National Survey of Substance Abuse Treatment Services
NCHS	National Center for Health Statistics (under CDC)
NDATUS	National Drug and Alcoholism Treatment Unit Survey
NHSDA	National Household Survey on Drug Abuse (now NSDUH)
NIAAA	National Institute on Alcohol Abuse and Alcoholism
NIDA	National Institute on Drug Abuse
NIJ	National Institute of Justice
NSDUH	National Survey on Drug Use and Health (formerly NHSDA)
NSS	National Seizure System
NTOMS	National Treatment Outcome Monitoring System
OAS	Office of Applied Studies, replaced by the Center for Behavioral Health Statistics and Quality (part of SAMHSA)
OJP	Office of Justice Programs (part of the U.S. Department of Justice)
OCDETF	Organized Crime Drug Enforcement Task Force
PAPI	paper-and-pencil interview
RSAT	Residential Substance Abuse Treatment program
SAMHSA	Substance Abuse and Mental Health Services Administration
SAPT	Substance Abuse Prevention and Treatment (a Federal block grant program)
SIFCF	Survey of Inmates in Federal Correctional Facilities
SISCF	Survey of Inmates in State Correctional Facilities
STAR	Sequential Transition and Reduction Model
STRIDE	System To Retrieve Information on Drug Evidence
STD	sexually transmitted disease
TCE	Targeted Capacity Expansion program
THC	delta-9-tetrahydrocannabinol (the principal psychoactive ingredient of marijuana)
UCR	Uniform Crime Reports
UFDS	Uniform Facility Data Set
YRBS	Youth Risk Behavior Survey
YRBSS	Youth Risk Behavior Surveillance System
