Analyses of programs with terms different from those presented above may use a linear interpolation. For example, a four-year project can be evaluated with a rate equal to the average of the three-year and five-year rates. Programs with durations longer than 30 years may use the 30-year interest rate.

Supplementary Information:

The FY 2007 PAR pilot, conducted from May 2007 to February 2008, was established so that agencies could explore different formats and timeframes for presenting financial and performance information and make this information more meaningful and transparent to the public. The pilot adjusted the timing for more detailed performance reporting, allowing the APR to coincide with the release of the President’s Budget. The pilot further required participating agencies to produce a Highlights document, which summarized key financial and performance information from the AFR and APR.

Agencies who participated in the pilot include the Department of Health and Human Services, Department of Defense, Small Business Administration, Department of State, National Aeronautics and Space Administration, Department of Homeland Security, National Science Foundation, Department of Energy, Denali Commission, Corporation for National Community Service and U.S. Agency for International Development.

Dustin Brown,
Deputy Assistant Directors for Management.
