

The Infrastructure Investment and Jobs Act will Deliver for Missouri

President Biden and Vice President Harris support the Senate's passage of the Infrastructure Investment and Jobs Act, the largest long-term investment in our infrastructure and competitiveness in nearly a century. **The need for action in Missouri is clear and recently released state-level data demonstrates that the Infrastructure Investment and Jobs Act will deliver for Missouri.** For decades, infrastructure in Missouri has suffered from a systemic lack of investment. In fact, the American Society of Civil Engineers gave Missouri a **C- grade** on its infrastructure report card. The historic Infrastructure Investment and Jobs Act will make life better for millions of Missouri residents, create a generation of good-paying union jobs and economic growth, and position the United States to win the 21st century. Specifically, the Infrastructure Investment and Jobs Act will:

- **Repair and rebuild our roads and bridges with a focus on climate change mitigation, resilience, equity, and safety for all users, including cyclists and pedestrians.** In Missouri there are 2,190 bridges and over 7,576 miles of highway in poor condition. Since 2011, commute times have increased by 5.9% in Missouri and on average, each driver pays \$743 per year in costs due to driving on roads in need of repair. **Based on formula funding alone, Missouri would expect to receive \$6.5 billion for federal-aid highway apportioned programs and \$484 million for bridge replacement and repairs under the Infrastructure Investment and Jobs Act over five years¹.** Missouri can also compete for the \$12.5 billion Bridge Investment Program for economically significant bridges and nearly \$16 billion of national funding in the bill dedicated for major projects that will deliver substantial economic benefits to communities.
- **Improve healthy, sustainable transportation options for millions of Americans.** Missourians who take public transportation spend an extra 79.6% of their time commuting and non-White households are 10 times more likely to commute via public transportation. 32% of transit vehicles in the state are past useful life. **Based on formula funding alone, Missouri would expect to receive \$674 million over five years under the Infrastructure Investment and Jobs Act to improve public transportation options across the state².**
- **Build a network of EV chargers to facilitate long-distance travel and provide convenient charging options.** The U.S. market share of plug-in electric vehicle (EV) sales is only one-third the size of the Chinese EV market. The President believes that must change. The bill invests \$7.5 billion to build out the first-ever national network of EV chargers in the United States and is a critical element in the Biden-Harris

¹ These values are estimates and may change based on updated factor data each fiscal year.

² Transit formula funding amounts are subject to changes resulting from the 2020 census or from annual transit service data reported to FTA's National Transit Database.

Administration's plan to accelerate the adoption of EVs to address the climate crisis and support domestic manufacturing jobs. **Under the Infrastructure Investment and Jobs Act, Missouri would expect to receive \$99 million over five years to support the expansion of an EV charging network in the state³. Missouri will also have the opportunity to apply for the \$2.5 billion in grant funding dedicated to EV charging in the bill.**

- **Help connect every American to reliable high-speed internet.** Broadband internet is necessary for Americans to do their jobs, to participate equally in school learning, health care, and to stay connected. Yet 15% of Missouri households do not have an internet subscription, and 5% of Missourians live in areas where, under the FCC's benchmark, there is no broadband infrastructure. **Under the Infrastructure Investment and Jobs Act, Missouri will receive a minimum allocation of \$100 million to help provide broadband coverage across the state, including providing access to the at least 330,000 Missourians who currently lack it. And, under the Infrastructure Investment and Jobs Act, 1,602,000 or 26% of people in Missouri will be eligible for the Affordability Connectivity Benefit, which will help low-income families afford internet access.**
- **Prepare more of our infrastructure for the impacts of climate change, cyber attacks, and extreme weather events.** From 2010 to 2020, Missouri has experienced 44 extreme weather events, costing the state up to \$20 billion in damages. **Under the Infrastructure Investment and Jobs Act, based on historical formula funding levels, Missouri will expect to receive \$21 million over five years to protect against wildfires and \$19 million to protect against cyberattacks. Missourians will also benefit from the bill's historic \$3.5 billion national investment in weatherization which will reduce energy costs for families.**
- **Deliver clean drinking water to every American and eliminate the nation's lead service lines and pipes.** Currently, up to 10 million American households and 400,000 schools and child care centers lack safe drinking water. **Under the Infrastructure Investment and Jobs Act, based on the traditional state revolving fund formula, Missouri will expect to receive \$866 million over five years to improve water infrastructure across the state and ensure that clean, safe drinking water is a right in all communities.**
- **Improve our nation's airports.** The United States built modern aviation, but our airports lag far behind our competitors. **Under the Infrastructure Investment and Jobs Act,**

³ These values are estimates and may change based on updated factor data each fiscal year.

airports in Missouri would receive approximately \$246 million for infrastructure development for airports over five years⁴.

Over the coming days and weeks, we will expect to receive additional data on the impact of the Infrastructure Investment and Jobs Act in Missouri.

⁴ Precise allocations would change each year because the formulas use current passenger boarding and cargo data, and this estimate is based on 2019 data.
