Modernizes Our Air Traffic Control Systems to Ensure Americans Fly Safely

The One Big Beautiful Bill invests $12.5 billion to overhaul America's outdated and failing air traffic control systems. This long-overdue modernization fulfills President Trump's vision to bring safety, efficiency, and world-class innovation to America's skies.

Modernizes Air Traffic Control Systems: Delivers a $12.5 billion investment to update our ATC systems, replacing aging and failing infrastructure at the FAA.

Critical Updates for Air Safety: Replaces outdated radar systems, telecommunications, and traffic control centers—some dating back to the 1960s.

Replaces Floppy Disks and Copper Wires: Ends the use of decades-old tech that costs taxpayers over $100 million per month in upkeep.

Delivers on President Trump's Promise: A bold step toward transforming our national airspace and making flying safer, faster, and more reliable.

Updates Runway Safety and Towers: Modernizes Terminal Radar Approach Control (TRACON) facilities and air traffic control facilities averaging 40 years old.

Funds Workforce and Training: Addresses the more than 3,000-controller shortage by investing in recruitment, retention, and advanced training technologies.

Boosts Efficiency: Consolidates outdated and unneeded facilities to streamline operations and lower long-term costs.

Does

Does Not

Does	Does Not
Invest $12.5 billion to fix and modernize air traffic control systems.	*Rely on outdated, unreliable systems power our skies.*
Replace obsolete telecommunications with high-tech solutions.	*Ignore telecommunications failures in places like Newark (EWR).*
Quickly addresses the FAA's staffing crisis with targeted recruitment and training.	*Allow continued air controller shortages to jeopardize flight safety.*
Upgrade critical infrastructure with state-of-the-art radar, traffic control centers, and telecom.	*Rely on 40-year-old facilities and failing tech to guide planes.*
